Mandaluyong City, 1550

Work History

Advanced App Engineering Lead/Specialist at Accenture, Mandaluyong City March 2026 to Current

- Developed a full-stack web application using React, TypeScript, JavaScript, HTML, CSS, and Java Spring Boot to manage utility connections (gas, electricity, and internet) for builders and customers, helping accelerate sales turnaround time.
- Designed and integrated secure authentication and authorization using Auth0 for login and password reset functionality, helping protect against brute-force attacks.
- Improved the design and UI/UX of customer login and registration forms to enhance accessibility and user experience.
- Worked on RESTful APIs using Java Spring Boot to manage and update Kafka events that trigger external CRM systems.
- Built a web/pwa application using React, TypeScript, and C# that visualizes graphs and a real-time status dashboard for mining machine monitoring.
- Used Claude Code, Codex, and Copilot CLI to navigate the codebase, understand existing functionality, and accelerate development.
- Created custom configs in Claude Code, Codex, and Copilot for secure agentic coding.

Analyst Programmer at Sun Life, BGC Taguig

April 2024 to March 2026

- Built a web-based Admin Console (React, Java Spring Boot, PostgreSQL) to manage middleware APIs for the Enterprise Mobile Framework (EMF), enabling non-technical teams to configure and test mobile app data without developer support.
- Provisioned and configured AWS infrastructure (EKS, S3, SNS, RDS) for middleware APIs supporting multi-market deployments across Asia.
- Partnered with DevOps to implement Jenkins CI/CD pipelines for the EMF mobile platform, enabling deployments to the Hong Kong market.
- Delivered a Proof of Concept (POC) integrating Ionic Capacitor plugins for push notifications across Hybrid apps built with Angular and React in a micro frontend architecture.
- Integrated push notifications and biometric authentication into Hybrid apps (React/Next.js, microservices) via EMF Capacitor plugins, supporting marketing campaigns and advisor onboarding workflows.
- Leveraged GitHub Copilot to quickly understand multiple codebases and develop specialized

skills, commands, and sub-agents for security and domain expertise.

Full Stack Developer at Pru Life UK, BGC Taguig

July 2022 to March 2024

- Developed a report module using React (JavaScript, HTML, CSS), PostgreSQL, and Java Spring Boot for an information system that helps to extract live data for a recruitment web app.
- Added an uploading file facility to a file-service using Nodejs for a recruitment system to fasten the document uploading.
- Revamped the outdated tech stack from React to Next.js of a time tracking application and added an admin module.
- Worked with Azure cloud blob storage for file uploading.
- Collaborated with DevOps team to set up docker with Jenkins pipeline to automate the deployment of a web app.

Analyst/Developer at FurtherEDGE Corp., Pasig City

September 2020 to July 2022

- Developed the HRIS and Payroll modules such as the DTR forms using Angular (HTML, CSS, JavaScript).
- Changed the UI/UX of some forms in the Personnel Information module and make it more user friendly.
- Added mobile and web responsiveness for Dashboard, Time and Attendance, Benefits, and Personnel Information module so it can be used in different mobile devices.
- Created a Python script for quality assurance testing to all HRIS modules.

Software Engineer at Hilsoft Inc., Mandaluyong City

May 2019 to June 2020

- Developed a new file application module using JavaScript, CSS, HTML, PHP, MySQL, and JQuery for requesting any document in the HRIS system.
- Designed the UI/UX of Personnel Information, employee tables, and the color scheme of different features.

Education

BSIT in Jose Rizal University, Mandaluyong

Status - Graduated

Achievements

Won a hackathon organized for an ACN client.

May 2026
